DETAILED ACTION

Claim Rejections – 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Lev et al (US 5,608,779).
- 2. In regards to claim 1, Lev discloses a method for transmitting bits of voice information through a mobile radio network (communication system 100), the method comprising the steps of: converting the bits of voice information, dependent on an even, in the mobile radio network into a transcoded format; processing the bits of voice information further; converting the bits of voice information into a non-transcoded format; and transmitting the bits of voice information in the non-transcoded format (col. 3 lines 45-62 and col. 5 lines 13-43).
- 3. In regards to claims 2 and 10, Lev discloses a method for transmitting bits of voice information through a mobile radio network, wherein the event is an intended importing of one of announcements, tones, and other bits of information into a conversation represented by the transmitted bits of voice information, wherein the step of processing includes importing the one of announcements, tones, and other bits of information into the conversation by a mixing device (conference bridge), and wherein

Art Unit: 2642

the step of transmitting includes transmission in a core network of the mobile radio network (col. 6 lines 18-25, col. 10-11 lines 64-22, and col. 7-8 lines 54-7).

- 4. In regards to claims 3 and 4, Lev discloses a method for transmitting bits of voice information through a mobile radio network, wherein the event is one of an intended handover in the mobile radio network, and an intended handover to another mobile radio network (col. 10 lines 29-57).
- 5. In regards to claims 5 and 7, Lev discloses a method for transmitting bits of voice information through a mobile radio network, wherein the step of transmitting occurs from a radio network controller (first site controller 206) to one of another radio network controller (second site controller 207) of the mobile radio network and a gateway into another network (col. 10 lines 14-28).
- 6. In regards to claim 6, Lev discloses a method for transmitting bits of voice information through a mobile radio network, wherein the conversions are initiated by a feeding device in a media gateway of the mobile radio network (col. 4 lines 11-28 and col. 5 lines 27-55).
- 7. In regards to claims 8 and 9, Lev discloses an apparatus for transmitting bits of voice information through a mobile radio network, comprising: a conversion device (transcoder 221); a part for processing; and a transmission part; wherein the bits of voice information, dependent on an event, are converted via the conversion device into a transcoded format, are further processed via the part for processing, are again converted in the conversion device into a non-transcoded format (col. 3 lines 45-62 and col. 5 lines 13-43), and are transmitted by the transmission part, in the non-transcoded

Art Unit: 2642

format, via an interface to one of another media gateway and switch (second switching center 202) (col. 10 lines 14-28).

Conclusion

- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Xiang et al (US 6,574,469) teach a system and method of minimizing the number of voice transcodings during a conference call in a packet-switched network.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thjuan P Knowlin whose telephone number is (703) 308-1727. The examiner can normally be reached on Mon-Fri 8:00-4:30pm.
- 10. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad Matar can be reached on (703)305-4731. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
- 11. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
